Stakeholder Communication

Participants were asked to select one stakeholder with whom they communicated. They were then asked a series of questions to determine which science communication model (diffusion, dialogue, or participation) they utilized while engaging with their stakeholder. In addition, they were asked to indicate their level of satisfaction with their own stakeholder communication (and the communication on the NEST project more generally), and where they obtained their stakeholder communication skills.

Motivations to Engage with Stakeholder Partners

Finally, participants were asked to complete the statement: "I am motivated to engage with stakeholders on the NEST project because..." on an agreement scale.
